

# TITANIC Tech.

## Titanic Distress Rockets

When RMS Titanic started to sink, she set off rockets to try to draw the attention of any ships that were in the area.

Experiment with the nose cones and fins on the paper rockets you are going to make. See which fins and cones help the paper rockets fly best from the 'stomp rocket launcher'.

1. Wrap a sheet a sheet of paper around the tube former.
2. Sellotape the tube of paper you've made so that it will not unravel.
3. Make fins and nose cones with the extra paper provided.
4. Launch from the stomp rocket launcher.
5. Measure how far the best design travelled.
6. Make a labelled drawing of your most successful design below.
